

DUNE CONSERVATION – Eradication of Giant Reeds (*Arundo donax*)

Giant Reeds *Arundo donax*

The Giant Reeds

The International Union for Conservation of Nature (IUCN) considers this Giant Reed as one of the 100 most dangerous plant species in terms of its invasiveness and how it alters the habitats it colonises.

Everything we can do to control and eradicate this exotic invasive species is a priority for the Marbella ProDunas Association.
